

WHY FITCV

Evidence-first job matching + CV generation

Turn messy job posts into a reviewable shortlist — then generate tailored CV outputs only when upstream evidence says “ready”.

What changes for job seekers

- Compare many roles with consistent fields
- See why a role ranks higher (not vibes)
- Stop rewriting — generate CV once fit is proven

Core idea

Evidence gates expensive work.

FitCV keeps each run inspectable through artifacts and stage-owned truth, so you can iterate with confidence.

Job search feels like busywork

High volume + low signal turns applying into an exhausting, manual pipeline.

Too many posts

You can't read everything. You miss good roles or waste time on weak ones.

Hard to compare

Every posting uses different language. Apples-to-apples ranking takes effort.

CV tailoring tax

Small edits add up. Copy/paste quickly becomes hours per week.

Result

You spend energy formatting and guessing — not improving fit, stories, and outcomes.

FitCV: evidence-first workflow

Make decisions on structured evidence — then generate CV only when fit is proven.

1) Ingest

Load many job posts
(including noisy sources)

2) Normalize + rank

Stable fields + explainable
shortlist and ordering

3) Generate

CV outputs with validation
+ repair safeguards

Gate: generate only after review

(evidence strong → then tailor CV)

Why this matters

Stop paying “CV tailoring tax” up front. FitCV pushes effort downstream, after shortlist is defensible.

Key capabilities (built for clarity)

Features matter only if they remove pain and create learning loop.

Explainable ranking

See why roles score higher using consistent fields and evidence — not gut feel.

Inspectable run artifacts

Stage-owned truth + artifacts make decisions reviewable, repeatable, improvable.

Control-plane UI

Review inputs, adjust settings, confirm changes with consistent surfaces.

Safe CV generation

Validation + repair safeguards reduce “almost good” drafts and wasted edits.

less rework

more signal

repeatable

Why FitCV for job seekers

Spend time where it increases outcomes: targeting, storytelling, iteration.

Fewer, better applications

Prioritize roles with highest fit so effort goes to best shots.

Less rewriting

Generate CV after fit proven — stop tailoring for roles you won't pursue.

Clear decisions

Explainable ranking helps you refine criteria and defend choices.
